

Task 1 QA Report

Demo Application Used: <https://demo.realworld.io>

Testing included login, signup, article creation, deletion, session handling, and validation testing.

Bugs Found:

1. Weak password validation
2. Missing delete confirmation
3. Long title UI overflow
4. Generic error handling
5. Session expiration issue

Root Cause Analysis:

The delete article feature deletes content instantly without user confirmation. This can cause accidental permanent deletion. A confirmation popup should be implemented before the delete API request is executed.
